Liberty Bridge Pipeline

Liberty Bridge is a proposed oil pipeline connecting two major oil transportation hubs: Guernsey, Wyoming, and Cushing, Oklahoma.

The project will expand infrastructure within a well-established energy corridor to safely and reliably move North American crude oil to U.S. markets and refineries.

Proposed route

The Liberty Bridge Pipeline will begin at the Guernsey crude oil terminal in Wyoming, where it will connect with existing infrastructure and the proposed Bridger Expansion Project. The pipeline will travel approximately 680 miles to Cushing, Oklahoma, where it will connect to the existing Cushing hub and South Bow's pipeline system serving U.S. Gulf Coast refineries.

Nearly 90 percent of the proposed route follows existing crude oil pipeline corridors.

Project at a glance

Route length:
~680 miles of new 36-inch pipeline

Crosses 4 states:
Wyoming, Colorado, Kansas, Oklahoma

Target construction start:
Summer 2027

Why Liberty Bridge

1. **Built to be safe and environmentally responsible.**
   Liberty Bridge will provide a safe, reliable and environmentally responsible way to transport oil, drawing on decades of experience building and operating pipelines in the region.
2. **Designed to create long-term value for communities along the route.**
   The project will generate property tax revenue, create opportunities for local workers and businesses during construction, and invest in communities through local partnerships and initiatives.
3. **Positioned to strengthen American energy security.**
   Liberty Bridge will expand access to reliable North American crude oil, reducing reliance on less stable sources of imported oil and supporting a secure, affordable energy system.
4. **Needed to deliver the energy America relies on.**
   Liberty Bridge will help provide a reliable supply of crude oil to U.S. refineries that produce the fuels and essential products Americans rely on every day.

Built on regional experience

Liberty Bridge is led by Bridger Pipeline, a family-owned, Wyoming-based company with decades of pipeline experience in the Rocky Mountain region. Bridger's partner, South Bow, brings extensive experience developing and operating major pipeline systems across North America.

Together, the partners bring complementary strengths to every stage of project development.

About Bridger Pipeline

Bridger Pipeline LLC is a private family-owned company, and one of the True Family Companies based in Casper, WY. Founded in 1948, the True Companies have grown into a vertically integrated oil and gas company with operations in oil & gas exploration, trading, drilling, trucking, oilfield equipment sales, pipelines and product sales. True Family Companies also holds significant cattle ranching, banking and real estate ownership.

About South Bow

South Bow safely operates 3,045 miles of crude oil pipeline infrastructure, connecting supply to U.S. refining markets in Illinois, Oklahoma and the U.S. Gulf Coast. We take pride in what we do—providing safe and reliable transportation of crude oil to North America's highest demand markets.
